IDENTIFIERS \*North Carolina

ABSTRACT

A research and development project was conducted to design a system for collecting and processing manpower information at a local level. Three systems for use by local institutions to obtain information needed for long-range planning were developed--an annual survey of high school student aspirations, a follow-up survey of students who leave an institution, and a survey of business and industry concerning employment availability and training needs. Fifty-five of the 57 North Carolina technical institutes and community colleges completed long-range plans by using the model and methods described here (or some variation). In addition, better relationships between the colleges and their potential students and business community resulted. Appendices include the three survey instruments and the printouts for compilation of data, a flow chart for the activities of the dissemination project, and suggested outline format for long-range planning developed by community college personnel. Occupational Research Unit

Raleigh 27602

This project was a culmination of three years of research related to long-range planning at the local level of the North Carolina Community College System. The Occupational Research Unit supported a two-year project to establish an Occupational Information Center at Forsyth Technical Institute. The purpose was to develop data collection procedures and a planning model which could be utilized by all community colleges and technical institutes in the North Carolina system. These procedures were published in June of 1973.

The third year of the research was concerned with implementation of the procedures. Methodology was formulated for local planning in the first two years of the study. Dissemination of the developed procedures to community colleges and technical institutes was a major thrust of the project.

North Carolina's system of community colleges has emphasized local planning. In August of 1973, the State Board of Education adopted the policy that all institutions should submit long-range plans by June 30, 1974.

The procedures developed at the Occupational Information Center and the modifications during this dissemination project enabled institutions to develop viable long-range plans in this relatively short period of time. This report explains how this effort was accomplished.

The procedures are simple and the results have proved reliable. Institutions are able to prepare in a short time educational plans based upon current information. The utilization of the developed systems has led to the improvement of planning in North Carolina's system of community colleges and technical institutes.

### III

### ACKNOWLEDGMENTS

Appreciation is expressed to the community college presidents and their staffs for enthusiastic support during the implementation of this research project. Without their cooperation, this report would not have been possible.

Special recognition is given the Management Information Service Division of the Public Education Department whose computer support made possible compilation of data. Mr. Don Schmidt especially devoted endless hours making the computer systems work.

Continuous support for planning has been provided by the State Board of Education and by Dr. Ben E. Fountain, Jr., State President of Community Colleges. The success of this project is due largely to this support.

Several staff members of the North Carolina Department of Community Colleges deserve special recognition. Mr. Charles A. Bucher and Dr. Terrence A. Tollefson provided supervision and assistance in the execution of the project. Mr. A. J. Bevacqua offered good advice at numerous points during the research.

Miss Martha Battle typed forms for all research, handled all correspondence and all data returned to the department.

For these valuable contributions, appreciation is gratefully expressed.

Finally, appreciation is expressed to the Occupational Research Unit, and especially Mr. Fred Manley, whose funds and leadership made this research possible.

## V. BODY OF THE REPORT

### A. The Problem

An Occupation Education Information Center was established on August 1, 1971, at Forsyth Technical Institute as a research and development project to design a system for collecting and processing manpower information at the local level. This two-year research project was completed on June 30, 1973. The research efforts of the Center have developed three systems for obtaining, processing and consolidating manpower information at the local level. The three systems have been designed for use by institutions to obtain the manpower information needed for long-range planning. The three systems include (1) an annual survey of high school student aspirations, (2) a follow-up survey of students who leave an institution and (3) a survey of business and industry to determine the present and future availability of jobs in the local economy.

The survey systems have been developed and tested in the community served by Forsyth Technical Institute. Aside from serving the long-range planning need, the manpower information can be used by an institution for many other purposes, from recruiting to the redesigning of curriculums. Descriptions of the three systems, including their utilization, were published in the Manpower Information Manual: A Manual For Local Planning, which is available to all institutions. The Manpower Information Manual contains a section that illustrates the utilization of local-level manpower information for long-range planning.

The Manpower Information Manual was distributed to all institutions; however, assistance was required for further dissemination of the results of this research project and for instruction in the use of the information systems.

The statewide long-range plans for the community college system, prepared by the Research Triangle Institute, developed a method for identifying the manpower education and training needs of the economy that should be met by the institutions within the system. This method determined the contributions that should be made to North Carolina's people and economy by the community college system's educational process; it was not related to the educational process itself. The concept is based upon information on the needs of the labor market. The planning concept is essentially an information process that will serve as a guide for providing the people with the education and training at the time it is needed.

No extensive data collection or survey efforts were undertaken during the statewide planning effort. Previously published data on the characteristics of population, labor force and economic activity were used. This data was adequate to develop the concept and to provide information on a statewide basis. The statewide planning effort validated the requirement for an institutional planning model that could be used by each institution in the preparation of its individual plan. A second contract with Research Triangle Institute initiated a model institution planning effort at Forsyth Technical Institute. The preparation of these plans has emphasized the requirement for the development of a system for the collection and processing of information

on manpower education and training needs at the local level. This information is vital to the occupational education effort in both secondary and post-secondary institutions. All available sources of manpower training needs have been utilized in the institutional planning effort; however, reliable planning and education program management could not be achieved until a simple and productive system for collecting and processing information at the local level was developed and implemented in local institutions in the North Carolina system.

B. Objectives

The objective of this research project was to disseminate the local-level long-range planning systems developed by the Occupational Information Center to all North Carolina technical institutes and community colleges. The project was designed to:

- a. assist in disseminating the results of the Information Center research project and help institutions in the implementation of the manpower information systems.
- b. assist institutions in the initiation of long-range plans using the manpower information collected at the local level.
- c. conduct inservice training for the institutions on the rationale and utilization of the information systems.
- d. continue research and develop methods for establishing "data banks" for the manpower information collected as a means for determining future trends in high school student aspirations and in the jobs available in the local economy.

### C. Procedures

#### 1. Inservice Workshops

Inservice Workshops were conducted in community colleges and technical institutes during the first six months of the project - July, August, September, October, November and December. These workshops acquainted the administrative staffs of the institutions with the planning process to be used by the Department. These workshops included the president, and his administrative staff, the director of this project and often a representative of the Department of Community Colleges. Workshops were conducted in thirty-six community colleges and technical institutes during this six-month period.

The entire planning process was outlined during these sessions. It was emphasized that in terms of resources the commitment from the institutions would be minimal. The long-range benefits were determined to outweigh the cost.

#### 2. Instruments

Three instruments were developed for gathering the necessary planning data at the local level: 1) a survey for determining career aspirations of high school seniors, 2) a survey for determining the needs of business and industry and 3) a follow-up survey of institutional graduates and ELMS\*.

The Dictionary of Occupational Titles was used to relate the three data collection systems. All of these survey forms were kept simple and copies are in the Appendix.

#### 3. Data Collection

- A. Student Survey - All high school seniors in the attendance area were surveyed. Detailed explanations of the procedures used are found in

\* An Acronym for Early Leavers with Marketable Skills.

the Manpower Information Manual. This survey takes only a few minutes of the student's time and can be completed usually during a homeroom period.

B. Business and Industry Survey - All businesses and industries in the attendance area were included in the survey. The businesses with fifty or more employees were all surveyed; those with less than fifty were sampled. Detailed descriptions of this procedure are also in the Information Manual.

C. Student Follow-up - A follow-up was conducted of all students who left the institutions during the past academic year. The survey produced a measure of the out-put of an institution during the year for each curriculum.

All of these systems were cost simple to allow institutions to use them within the staff of the school.

#### 4. Data Compilation

Computer programs and computer time was available at the Department of Community Colleges. When the surveys were completed by the local institutions, they were sent to the Department for compilation. A turn-around time of about three weeks was usual.

The data compilations in this report were the result of two years of study to determine the types of information needed for programmatic decision-making. Examples of these data may be seen in the Appendix.

#### 5. Planning Procedures

A committee of college presidents and staff members, and Department of Community Colleges personnel developed a format for long-range planning.

This format was suggested as minimal in preparing institutional plans and should be used as guide only. Each institution was free to develop its plan in the manner best suited to its local needs.

#### D. Results

The major result of this project is that fifty-five of the fifty-seven technical institutes and community colleges submitted long-range plans for institutions. Not all institutions utilized the methods developed in this project, but the influence of the project helped to develop other viable approaches to the planning process.

A less obvious result was the increased recruiting potential of the schools. The planning system gave them access to names, phone numbers, addresses and the major interest of every student in the contingent school districts. The potential for recruitment and counseling prior to entering the institution was greatly increased. Improved relationships with public school personnel was a constant result.

Faculty members were often used to conduct business surveys. Better institution - business relationships led to a number of placements and often to new courses in the institutions.

The implementation of these procedures is fully explained in a filmstrip tape presentation, which is a portion of this final report.

The result has been the community involvement in curricula planning for the institution which has led to more relevant programs. Institutions now have the capabilities to assess community needs in a quantitative manner. Decisions are based on sound data, collected in a systematic manner.

### E. Conclusions

That fifty-five institutions were able to complete long-range plans in a one-year period attests to the success of this project. Results demonstrate that the procedures developed in the pilot project at the Occupational Information Center will apply on a large scale.

Another obvious conclusion is that local planning is an individual matter. The individuality of the plans does not distract from the validity but provides alternatives for achieving the same end: improved institutional planning.

### F. Recommendations

Planning is a continuous process which must be based upon formal data. For planning to occur in this manner, the processes for continuous planning must be maintained. The recommendations for maintaining continuous planning are: 1) centrally located staff to handle the data, 2) a redesign of the survey instruments to optical scan for ease of handling and 3) a continuous data bank for each institution for planning purposes.

## APPENDIX A

Appendix A contains the survey instrument used to determine the career aspirations of high school seniors.

## Appendix A

## APPENDIX B

Appendix B contains the survey instrument used to determine present and projected skill needs of the labor market.

HAPPY-COMMUNITY TECHNICAL INSTITUTE  
406 Chestnut Street  
Henderson, North Carolina 27536

Survey of Projected Skill Needs of the Labor Market

Date \_\_\_\_\_

The groupings used for this survey were designed by the Labor Department for their job survey form. The first six groupings ("A" through "F") are general and list jobs that apply to most businesses and industries. The seventh occupational grouping ("G"), "Production (Plant) Operations," is directed to the specific manpower skill needs of your particular business. We have left this last grouping unstructured, and we ask that you list in this category the jobs which could normally be filled by an employee who had attended a one or two-year program at Vance-Granville Technical Institute.

GENERAL DIRECTIONS

1. Column 1 - Job Classifications. Please match, insofar as possible, your company's job titles with those listed under each grouping. Leave blank classifications that do not apply to your business. Please add in the blank spaces the jobs in your company which are not listed on the form.
2. Column 2 - Current Employment. Please list the number of current employees, in each job listed, for which a technical institute might provide training.
3. Column 3 - Estimated Employment - 1978. Please list the number of employees you estimate you will have in each job classification in 1978 (in the month you have indicated above).
4. A stamped, addressed envelope is enclosed for the return of the completed form.
5. If you have any questions, please call or write Happy-Community Technical Institute. Thank you.

ALL INFORMATION FURNISHED WILL BE HELD IN STRICT CONFIDENCE

#### A. Service Occupations

Include workers in jobs performing services for persons that require direct contact or close association with the individual; occupations concerned with the protection of individuals, or of public or private property; and occupations concerned with preparing the serving food and beverages.

**B. Maintenance, Construction, Repair and Powerplant Occupations**

Include all skilled and semi-skilled workers performing machine and manual tasks involving maintenance, construction, repair, and powerplant operations in occupations requiring training beyond that learned on the job.

**C. Managers and Officers**

Include persons concerned with managerial functions common to many types of organizations as well as occupations which require a knowledge of the management and operations of this organization, for which training may be provided by a technical institute.

#### D. Technician Occupations

Include all persons engaged in technical work utilizing theoretical knowledge of fundamental scientific, engineering, mathematical, computer programming, or draft design principles comparable to those acquired through study at community colleges, technical institutes, or other formal post high school training less extensive than a 4-year college course.

Nature of Your Business

B-7

Please describe the principal activity and the major product or service of your business, e.g., manufacturing - women's shoes; warehousing - steel products; research lab - radio and T.V. receiver; retail trade - shoe store; etc.

---

---

---

Emerging Occupations

List any emerging occupations in your industry which will require specialized training which could be provided by a technical institute or community college.

---

---

---

Comments - any comments you may wish to make

---

---

---

Additional Information

(Should questions or additional suggestions arise, please call: 919-492-2061

Name and Telephone Number of Person and Office completing this survey form

Happy-Community Technical Institute will hold all information furnished by you in strict confidence.

## APPENDIX C

Appendix C contains the instrument used for the follow-up of graduates and early leavers.

29

## Appendix C

**Dear Former Student,**

The staff of Friends Technical Institute is conducting a follow-up study of all students who left Friends Technical Institute during the past school year. We ask that you complete the questionnaire below and return it in the stamped envelope which is enclosed. This information will be of great value to Forsyth Technical Institute in planning for future students. Your cooperation is appreciated.

Sincerely,

Mrs. Betty R. Ready  
Counselor for Institutional Research

LOCAL INSTITUTIONS  
DEPARTMENT OF COMMUNITY COLLEGES

## APPENDIX F

Appendix F contains a suggested outline format for long-range planning developed by community college personnel.

SUGGESTED OUTLINE FORMAT FOR LONG-RANGE PLANNING

PART I - PROGRAM PLANNING

A. Information Systems

The production of a long-range plan requires the development of information gathering systems. Information for planning should be collected continuously in a systematic manner enabling planning to be an on-going process. The information collected should relate to the total program of the institution including: college transfer, continuing education, and General Education.

An information system for planning should include:

1. Historical data

a. enrollment by program

b. student origin by county

c. age of students (ex. % of curriculum students not coming directly from high school)

d. cost

e. sources of funds

f. facility

2. Secondary Sources of data

a. Census

b. Department of Labor projections

c. County Business patterns

d. Social and Economic Characteristics of N. C.

e. other data which may be appropriate to individual situation

3. Primary Sources of data

a. The determination of the aspirations of high school students after they graduate will be used to:

1. match their aspirations and the needs of the labor market
2. assist in matching their aspirations, the needs of the labor market, and the curriculums that should be offered

b. The follow-up survey of graduates and ELMS will be used to:

1. determine the first job of the individual
2. determine the job held by the individual 10 to 12 months after leaving the institution
3. match the curriculums and the jobs graduates and ELMS are qualified to fill

c. The survey of the skills and numbers of skills needed by the labor market during the next 5 to 10 years will be used to determine:

1. job names or classifications
2. the number of jobs to be filled each year
3. the skills required for each job
4. the curriculums to be offered to provide the skills needed for the jobs

B. Long-Range Plan

1. Purpose or Mission Statement

(Suggested as a one paragraph statement of the purpose of the institution and its programs)

2. Goals

55

(Sometimes called long-range objectives or continuing objectives.)

SUGGESTED OUTLINE FORMAT FOR LONG-RANGE PLANNING

PART I - PROGRAM PLANNING

A. Information Systems

The production of a long-range plan requires the development of information gathering systems. Information for planning should be collected continuously in a systematic manner enabling planning to be an on-going process. The information collected should relate to the total program of the institution including: college transfer, continuing education, and General Education.

An information system for planning should include:

1. Historical data
  - a. enrollment by program
  - b. student origin by county
  - c. age of students (ex. % of curriculum students not coming directly from high school)
  - d. cost
  - e. sources of funds
  - f. facility
2. Secondary Sources of data
  - a. Census
  - b. Department of Labor projections
  - c. County Business patterns
  - d. Social and Economic Characteristics of N. C.
  - e. other data which may be appropriate to individual situations

### 3. Primary Sources of data

- a. The determination of the aspirations of high school students after they graduate will be used to:
  1. match their aspirations and the needs of the labor market
  2. assist in matching their aspirations, the needs of the labor market, and the curriculums that should be offered
- b. The follow-up survey of graduates and ELMS will be used to:
  1. determine the first job of the individual
  2. determine the job held by the individual 10 to 12 months after leaving the institution
  3. match the curriculums and the jobs graduates and ELMS are qualified to fill
- c. The survey of the skills and numbers of skills needed by the labor market during the next 5 to 10 years will be used to determine:
  1. job names or classifications
  2. the number of jobs to be filled each year
  3. the skills required for each job
  4. the curriculums to be offered to provide the skills needed for the jobs

### B. Long-Range Plan

#### 1. Purpose or Mission Statement

(Suggested as a one paragraph statement of the purpose of the institution and its programs) 57

#### 2. Goals

(Sometimes called long-range objectives or continuing objectives.)

These statements outline the goals of the institution over a long period of time. Goals are not quantifiable - they are statements that guide the efforts of the institution over a long period of time in the future.)

3. Statement of the needs of the community served by the institution. (Student aspirations, trends in the local economy, future jobs that must be filled in the next 5 to 10 years, adult needs, and other needs as indicated by the information system.
4. Statement of the institution's objectives to meet the needs of the community and to carry out the institution's stated goals - each objective should be directed toward an eventual fulfillment of the stated goals.
5. Statement of the strategies to be followed in meeting the stated objectives. What programs and what output - numbers and types - of skills for each year. (Alternate strategies may be developed and evaluated prior to selecting the final strategy.)
6. Development of the programs needed to carry out the stated objectives - these are short-range objectives for 4 to 6 years. The programs should indicate needs for:
  - a. Continuing Education, General Education, College Transfer
  - b. Programs required to meet the future needs of the labor market
  - c. Students to be enrolled to produce the required numbers and types of manpower skill output from the institution's graduates and ELMS
  - d. Staff and faculty needed for these programs
  - e. Equipment needed for the programs

7. The cost of the programs for staff and faculty, equipment, and the identification of all financial resources available and a listing of additional funds required should be included.

## PART II - FACILITY PLANNING

### Campus Plan

A campus plan is either an artist's rendition, a modeler's creation, or an architect's drawing of the translation of the findings of the educational long-range plan into a physical layout of the campus in its proposed setting.

An information system for facility planning should include:

1. Facility Inventory, Projected Needs and Goals (Attachment "A" is a tool for accomplishment)
2. Facility Master Plan prepared by a professional design firm - architectural or land-use planner and should include the following:
  - a. Study of existing site, topographic features and drainage.
  - b. Study of existing and proposed thoroughfare planning to the areas and recommendations for campus development.
  - c. Study in connection with existing water, sewer and electrical facilities and recommendations for their future development.
  - d. Study of existing buildings to include evaluation of present facilities and their use in the future development and recommendations for additions, if any, which should be made to the present structure.

- e. Study of owner's future needs as best they can be developed from data furnished by the owner and any consultants acting in behalf of the owner.
- f. The design presentation should include site plans for various buildings based on existing plans, immediate plans and potential development along with roadways, walks, etc.
